

## Environmentally Managed System Warranty

The EMS inner socket system is custom made to each individual patient. There is a six-month warranty on manufacturer's defect or material failure.

Upon examination of returned EMS socket, determination will be made as to warranty coverage and replacement. Please mail back socket along with pictures of outer and inner socket trimlines.

We request a replacement order be sent. We will manufacture new EMS socket and send as soon as possible. Upon receiving EMS socket for consideration of replacement please mail previous socket in for warranty evaluation. EMS will invoice for new socket until determination is made. If socket meets warranty criteria a credit will be issued.

We highly recommend an instruction course in EMS technology to maintain optimum experience for your patient.
